

BSM Safety Point BSM6 version (Pontoon Ladder & Life-Buoy Silzig)

The scale is intended to secure the pontoons and banks in case of fall of a man overboard.
The person may leave the water without assistance.
The scale is in its box, and can be deployed by pulling a rope which is close to the water

Advantages:

- Unlike conventional scales, it is very visible and does not encroach on the edge of the pontoons, boats can dock safely near the ladder.
- The ladder is secure and protected in its box, it does not remain permanently in the water (no problems with corrosion, seaweeds, molluscs)

Ladder can be associated with the buoy, and also a fire extinguisher box
This set of equipments is a real safety point, clearly visible and reconizable by far
